

# CHARLES & COLVARD CREATED MOISSANITE®

OCTOBER 2016

*Loose Moissanite  
and Fine Jewelry*

*A beautiful and brilliant combination*

*S* STULLER

# The World's Most Brilliant Gem<sup>®</sup>

Since its discovery more than a century ago, Created Moissanite has won the hearts of many. With a fire that is 2.4 times that of a diamond, this unique jewel makes a fiery statement at a fraction of the cost.

Why does Moissanite resonate with today's customers?

- Colorless and near colorless options
- Gives an impression of more for less money
- Durability
- A classic look that will last a lifetime
- Traceable origins
- A limited lifetime warranty from Charles & Colvard

Master craftsmen cut and polish each Moissanite by hand to realize its full potential of fire and brilliance. When paired with the perfect setting, it reveals its true beauty.

Whether it's loose stones or completely set jewelry, Forever One™ or Forever Brilliant®, no one offers more choices than Stuller.

Visit [Stuller.com/MoissaniteBenefits](http://Stuller.com/MoissaniteBenefits) to learn more.

"Every customer deserves a brilliant and sparkling stone without worrying about cost. Charles and Colvard Created Moissanite offers affordable options to customers and profitable solutions to retailers."

# Identifying Moissanite

## HOW TO IDENTIFY CREATED MOISSANITE FROM NEAR COLORLESS JEWELS

**DOUBLE REFRACTION:** View Moissanite with a magnifying loupe (10X) through its crown or pavilion. Doubling of the back facet junctions can be seen.

**INCLUSIONS:** Under magnification, you will see needle-like inclusions perpendicular to the table. All Moissanite is eye clean.

**DISPERSION AND REFRACTIVE INDEX:** When viewed under a high-intensity light, moissanite has greater fire and brilliance than a diamond, a result of its high refractive index and dispersion.

**TESTERS:** Moissanite testers in conjunction with a thermal diamond tester can easily distinguish Moissanite.

GemOro® Testerossa Tester is recommended. It is the first tester to identify Forever One Moissanite.

# Offer the Best Care for Moissanite Jewelry

For your customers, keeping created Moissanite jewelry clean has never been easier. Klean Karats cleaners and polishing cloths return brilliance to their jewelry. Choose from solutions in fine, natural, gentle, and silver or polishing cloths in treated and untreated. And the entire line is customizable. Brand your store with this line. Then, use it for add-on sales or complimentary gift with purchase. Your store. Clean jewelry. It's an impression that will keep customers coming back.

Visit [Stuller.com/Klean-Karats](http://Stuller.com/Klean-Karats) to learn more.

# Working With Moissanite

**SETTING:** Handle Moissanite as you would a diamond, being careful not to apply pressure to sharp points. Steel tools will not scratch it. We recommend never using pliers to set Moissanite because the pressure cannot be controlled.

**PRONG WORK:** If bearings are properly made in each prong, moissanite will pose no problem. In settings with precut bearings, make sure the lower bearing section is parallel with the pavilion facets.

**HAMMER WORK:** With properly cut bearings, you may use your electric hammer to move metal above the girdle onto the jewel. Trimming inside the fold with a graver should not pose any problems. Burnish on the metal over the jewel — not against the jewel.

**TRIMMING METAL PRONGS:** Be sure abrasive wheels are made of rubber and do not contain silicon carbide (carborundum) or diamond abrasives. These will scratch moissanite on contact.

**POLISHING:** Abrasives used to polish gold and platinum can be used on Charles & Colvard Created Moissanite. Boil and steam as you would with diamonds.

**ULTRASONIC MACHINES:** Single pieces cause no problem. For multiple pieces, arrange on hooks, so they do not touch and scratch each other. Use either hot or cold solution.

**REPAIRS AND SIZING:** These may be done with Charles & Colvard Created Moissanite in place. Be sure the jewel is properly cleaned and that the torch heat is not above solder melting point. Some torches are capable of extreme temperature ranges that can damage the stone. Heating will turn the jewel cherry red. When cool, it will return to its original color. Platinum solder tends to run into the jewel, so we recommend white gold solder. Quenching should be done after a few seconds.

**ACIDS:** You may pickle repaired pieces just as you would with a diamond.
